Module :2(HTML)

Define the terms:

1.Websites : a group of World Wide Web pages usually containing links to each other and made available online by an individual, company, or organization.

2. Webpage : A web page (or webpage) is a hypertext document on the World Wide Web. Web pages are delivered by a web server to the user and displayed in a web browser. A website consists of many web pages linked together under a common domain name.

3. Web browser : A browser is an application program that provides a way to look at and interact with all the information on the World Wide Web. This includes Web pages, videos and images.

4. Web server : A web server is software and hardware that uses HTTP (Hypertext Transfer Protocol) and other protocols to respond to client requests made over the World Wide Web. The main job of a web server is to display website content through storing, processing and delivering webpages to users.

5.HTML : HTML (Hypertext Markup Language) is a text-based approach to describing how content contained within an HTML file is structured. This markup tells a web browser how to display text, images and other forms of multimedia on a webpage.

6.CSS : CSS is the acronym of "Cascading Style Sheets". CSS is a computer language for laying out and structuring web pages (HTML or XML). This language contains coding elements and is composed of these "cascading style sheets" which are equally called CSS files (. css).
